                                                                                                                                                                                                                                                                           CC alpha subunit that contains substituted amino acids at specific consistions. The polypeptides and host cells are useful for preparing cc (-)-(15,2R)-cis-naphthalene dihydrodiol, (- or +)-cis-biphenyl-3,4-cc dihydrodiol, (15,2R)-cis-phenanthrene-1,2-dihydrodiol, cis-1,2-cc dihydroxyindan, 1,2-dihydroxy-1,2,3,4-tetrahydronaphthalene, which cc involves contacting them with naphthalene, biphenyl, phenanthrene, cc indene, and 1,2-dihydronaphthalene respectively. The polypeptides and ct the host cells are also useful for preparing 1,2-dihydroxy-1,2-cc dihydroxy-naphthalene or 3,4-dihydroxy-3,4-dihydroxy-1,2-cc dihydrophenanthrene or 3,4-dihydroxy-3,4-dihydrophenanthrene which constructing them with phenanthrene. The polypeptides and the host cells are also used in bioremediation in which they oxidise an cromatic compound such as indene, 1,2-dihydronaphthalene, dibenazofuran, cc dibenazothiophene, 9,10-dihydroanthracene, or 9,10-dihydrophenanthrene a corresponding dihydro dihydroxy compound. The polypeptides and the host cc cells are useful for preparing chiral diols for use in the polymer, cresin, pharmaceutical or rubber industry. The present sequence represents a naphthalene dioxygenase (NDO) mutant alpha subunit, given in the cc exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    B
The present invention describes a naphthalene dioxygenase (NDO) or NDO related complex (I) comprising several polypeptides which contain an alpha subunit that contains substituted amino acids at specific positions. The polypeptides and host cells are useful for preparing (-)-(1S, 2R)-cis-naphthalene dihydrodiol, (- or +)-cis-biphenyl-3,4-dihydrodiol, (1S, 2R)-cis-phenanthrene-1,2-dihydronaphthalene, which dihydroxyindan, 1,2-dihydroxy-1,2,3,4-tetrahydronaphthalene, which involves contacting them with naphthalene, biphenyl, phenanthrene, indene, and 1,2-dihydronaphthalene respectively. The polypeptides and the host cells are also useful for preparing 1,2-dihydroxy-1,2-dihydroxy-1,2-dihydrophenanthrene or 3,4-dihydroxy-3,4-dihydrophenanthrene which
                                                                                                                                                                                                                              Novel naphthalene dioxygenase mutant having a specific amino acid substitution for preparing chiral diols for use in the polymer, resin pharmaceutical or rubber industry and for carrying out bioremediation
                                                                                                                                                                                       Claim
                                                                                                                                                                                                                                                                                                                                                                       (IOWA ) UNIV IOWA RES

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        involves contacting them with phenanthrene. The polypeptides and the host cells are also used in bioremediation in which they oxidise an aromatic compound such as indene, 12-dihydronaphthalene, benzocyclohelpt-1-ene, anthracene, phenanthrene, dibenzo(1.4)dioxan, acenaphthylene, naphthalene, biphenyl, fluorene, dibenzofuran, dibenzofuran, adhydronanthracene, or 9,10-dihydronanthrene a corresponding dihydro dihydroxy compound. The polypeptides and the host cells are useful for preparing chiral diols for use in the polymer, resin, pharmaceutical or rubber industry. The present sequence represent a naphthalene dioxygenase (NDO) mutant alpha subunit, given in the exemplification of the present invention.
                                                                                                                                     Pseudomonas sp. strain NCIB 9816-4; naphthalene dioxygenase; NDC inducible multi-component enzyme; alpha subunit; mutant; chiral polymer; resin; pharmaceutical; rubber industry; bioremediation
                                                                                                                                                                                                                                                                                                AAB12582 standard;

CC dihydroxyindan, 1,2-dihydroxy-1,2,3,4-tetrahydronaphthalene, which CC involves contacting them with naphthalene, biphenyl, phenanthrene, CC indene, and 1,2-dihydronaphthalene, respectively. The polypeptides and CC the host cells are also useful for preparing 1,2-dihydroxy-1,2-CC involves contacting them with phenanthrene. The polypeptides and the CC involves contacting them with phenanthrene. The polypeptides and the CC host cells are also used in bioremediation in which they oxidise an CC aromatic compound such as indene, 1,2-dihydronaphthalene, CC dibenzocyclohelpt-1-ene, anthracene, phenanthrene, dibenzofuran, CC acenaphthylene, naphthalene, biphenyl, fluorene, dibenzofuran, CC dibenzothiophene, 9,10-dihydroanthracene, or 9,10-dihydrophenanthrene a CC corresponding dihydro dihydroxy compound. The polypeptides and the host C cells are useful for preparing chiral diols for use in the polymer, CC anaphthalene dioxygenase (NDO) mutant alpha subunit, given in the CC a naphthalene dioxygenase (NDO) mutant alpha subunit, given in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                             dihydroxyindan, 1,2-dihydroxy-1,2,3,4-tetrahydronaphthalene, which convolves contacting them with naphthalene, biphenyl, phenanthrene, convolves contacting them with naphthalene, biphenyl, phenanthrene, convolves contacting them with naphthalene respectively. The polypeptides and convolves contacting them with phenanthrene. The polypeptides and the convolves contacting them with phenanthrene. The polypeptides and the convolves contacting them with phenanthrene. The polypeptides and the convolves contacting them with phenanthrene. The polypeptides and the const cells are also used in bioremediation in which they oxidise an end of convolves compound such as indene, 1,2-dihydronaphthalene, convolved the properties and the convolved the properties and the personaphthylene, naphthalene, biphenyl, fluorene, dibenzofuran, corresponding dihydro dihydroanthracene, or 9,10-dihydrophenanthrene a corresponding dihydro dihydroxy compound. The polypeptides and the host corresponding dihydro dihydroxy compound. The polypeptides and the host corresponding dihydro dihydroxy compound to use in the polymer, cresin, pharmaceutical or rubber industry. The present sequence represents anaphthalene dioxygenase (NDO) mutant alpha subunit, given in the convolved the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes a naphthalene dioxygenase (NDO) or NI related complex (I) comprising several polypeptides which contain an alpha subunit that contains substituted annotating several positions. The polypeptides and host cells are useful for preparing (-)-(1S,2R)-cis-napththalene dihydrodiol, (- or +)-cis-biphenyl-3,4-dihydrodiol, (1S,2R)-cis-phenanthrene-1,2-dihydrodiol, cis-1,2-dihydrodiol, cis-1,2-dihydrodiol
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel naphthalene dioxygenase mutant having a specific substitution for preparing chiral diols for use in the pharmaceutical or rubber industry and for carrying out

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC The present invention describes a naphthalene dioxygenase (NDO) or NDO CC related complex (1) comprising several polypeptides which contain an CC alpha subunit that contains substituted amino acids at specific CC positions. The polypeptides and host cells are useful for preparing CC (-)-(15.2R)-cis-naphthalene dihydrodiol, (- or +)-cis-biphenyl-3,4-CC dihydroxyindan, 1.2-dihydroxy-1.2.3,4-terrahydronaphthalene, which CC involves contacting them with naphthalene, biphenyl, phenanthrene, clidhydroxyindan, 1.2-dihydronaphthalene, perparing 1.2-dihydroxy-1.2-CC dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy-1.2-dihydroxy

The polypeptides and the host cells are useful for preparing chiral diols for use in the polymer, resin, pharmaceutical or rubber industry. The present sequence represent a naphthalene dioxygenase (NDO) mutant alpha subunit, given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     dihydroxyindan, 1,2-dihydroxy-1,2,3,4-tetrahydronaphthalene, which involves contacting them with naphthalene, biphenyl, phenanthrene, indene, and 1,2-dihydronaphthalene respectively. The polypeptides and the host cells are also useful for preparing 1,2-dihydroxy-1,2-dihydrophenanthrene or 3,4-dihydroxy-3,4-dihydrophenanthrene which involves contacting them with phenanthrene. The polypeptides and the host cells are also used in bloremediation in which they oxidise an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes a naphthalene dioxygenase (NDO) or NDO related complex (I) comprising several polypeptides which contain an alpha subunit that contains substituted amino acids at specific positions. The polypeptides and host cells are useful for preparing (-)-(1s,2R)-cis-naphthalene dihydrodiol, (- or +)-cis-biphenyl-3,4-dihydrodiol, (1S,2R)-cis-phenanthrene-1,2-dihydrodiol, cis-1,2-dihydrodiol, cis-1,2-dihydr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel naphthalene dioxygenase mutant having a specific amino acid substitution for preparing chiral diols for use in the polymer, resin pharmaceutical or rubber industry and for carrying out bioremediation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 9; Page 129-131; 151pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Š
                                                               The present invention describes a naphthalene dioxygenase (NDO) or NDO related complex (I) comprising several polypeptides which contain an alpha subunit that contains substituted amino acids at specific positions. The polypeptides and host cells are useful for preparing (-)-(15,2R)-cis-naphthalene dihydrodiol, (- or +)-cis-biphenyl-3,4-cihydrodiol, (15,2R)-cis-phenanthrene-1,2-dihydrodiol, cis-1,2-dihydrodiol, (15,2R)-cis-phenanthrene-1,2-dihydrodiol, cis-1,2-cihydroxyindan, 1,2-dihydroxy-1,2,3,4-tetrahydronaphthalene, which involves contacting them with naphthalene, biphenyl, phenanthrene, indeme, and 1,2-dihydronaphthalene biphenyl, phenanthrene, cindeme, and 1,2-dihydronaphthalene respectively. The polypeptides and the host cells are also useful for preparing 1,2-dihydroxy-1,2-dihydrophenanthrene or 3,4-dihydroxy-3,4-dihydroxy-3,4-dihydroxy-1,2-dihydrophenanthrene also used in bioremediation in which they oxidise an aromatic compound such as indeme, 1,2-dihydronaphthalene, and 1,3-dihydronaphthalene, and 1,3-dihydronap
benzocyclohelpt-1-ene, anthracene, phenanthrene, dibenzo(1,4)dioxan, acenaphthylene, naphthalene, biphenyl, fluorene, dibenzofuran, dibenzothiophene, 9,10-dihydroanthracene, or 9,10-dihydrophenanthrene a

The polypeptides and the cells are useful for preparing chiral diols for use in the polymer, resin, pharmaceutical or rubber industry. The present sequence repr a naphthalene dioxygenase (NDO) mutant alpha subunit, given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                      Pseudomonas sp. strain NCIB 9816-4; naphthalene dioxygenase; NDO; inducible multi-component enzyme; alpha subunit; mutant; chiral d polymer; resin; pharmaceutical; rubber industry; bioremediation.

                                                                                                                                                                                                                                                                                  Ş
                                                                                                                                                                                                                                                                                                                       dihydroxyindan, 1,2-dihydroxy-1,2,3,4-tetrahydronaphthalene, which convolves contacting them with naphthalene, biphenyl, phenanthrene, indene, and 1,2-dihydronaphthalene respectively. The polypeptides and the host cells are also useful for preparing 1,2-dihydroxy-1,2-cdihydrophenanthrene or 3,4-dihydroxy-3,4-dihydrophenanthrene which convolves contacting them with phenanthrene. The polypeptides and the host cells are also used in bloremediation in which they oxidise an aromatic compound such as indene, 1,2-dihydronaphthalene, benzocyclohelpt-1-ene, anthracene, phenanthrene, dibenzo(1,4)dioxan, caenaphthylene, naphthalene, biphenyl, fluorene, dibenzofuran, caenaphthylene, 9,10-dihydroanthracene, or 9,10-dihydrophenanthrene a corresponding dihydro dihydroxy compound. The polypeptides and the host cells are useful for preparing chiral diols for use in the polymer, resin, pharmaceutical or rubber industry. The present sequence represents a naphthalene dioxygenase (NDO) mutant alpha subunit, given in the care was a compound.

The present invention describes a naphthalene dioxygenase (NDO) or NI related complex (I) comprising several polypeptides which contain an alpha subunit that contains substituted and subunit that contains substituted along access at specific positions. The polypeptides and host cells are useful for preparing (-)-(15,2R)-cis-naphthalene dihydrodiol, (- or +)-cis-biphenyl-3,4-dihydrodiol, (15,2R)-cis-phenanthrene-1,2-dihydrodiol, cis-1,2-dihydrodiol, cis-1,2-dihydrodio

1,2-dihydroxy-1

,2,3,4-tetrahydronaphthalene,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ρy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              cc involves contacting them with naphthalene, biphenyl, phenanthrene, cc indene, and 1,2-dihydronaphthalene respectively. The polypeptides and ct the host cells are also useful for preparing 1,2-dihydroxy-1,2-c dihydrophenanthrene or 3,4-dihydroxy-3,4-dihydrophenanthrene which cc involves contacting them with phenanthrene. The polypeptides and the chost cells are also used in bioremediation in which they oxidise an cc aromatic compound such as indene, 1,2-dihydronaphthalene, cc benzocyclohelpt-1-ene, anthracene, phenanthrene, dibenzo(1,4)dioxan, cc dibenzochiophene, 9,10-dihydroanthracene, dibenzofuran, cc dibenzochiophene, 9,10-dihydroanthracene, or 9,10-dihydrophenanthrene a corresponding dihydro dihydroxy compound. The polypeptides and the host cc clls are useful for preparing chiral diols for use in the polymer, cresin, pharmaceutical or rubber industry. The present sequence represents a naphthalene dioxygenase (NDO) mutant alpha subunit, given in the cc exemplification of the present invention.
                                                                      Pseudomonas sp. strain NCIB 9816-4; naphthalene dioxygenase; NDO; inducible multi-component enzyme; alpha subunit; mutant; chiral dipolymer; resin; pharmaceutical; rubber industry; bioremediation.

CC alpha subunit that contains substituted amino acids at specific copositions. The polypeptides and host cells are useful for preparing cc (-)-(15,2R)-cis-naphthalene dihydrodiol, (- or +)-cis-biphenyl-3,4-cc dihydrodiol, (15,2R)-cis-phenanthrene-1,2-dihydrodiol, cis-1,2-cc dihydroxyindan, 1,2-dihydroxy-1,2,3,4-tetrahydronaphthalene, which cc involves contacting them with naphthalene, biphenyl, phenanthrene, cc indene, and 1,2-dihydronaphthalene respectively. The polypeptides and ct the host cells are also useful for preparing 1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydroxy-1,2-dihydrophenanthrene which compound such as indene, 1,2-dihydronaphthalene, which chost cells are also used in bioremediation in which they oxidise an aromatic compound such as indene, 1,2-dihydronaphthalene, cc dibenzocthiophene, 9,10-dihydronaphthalene, dibenzocfuran, cc dibenzothiophene, 9,10-dihydroanthracene, or 9,10-dihydrophenanthrene a ccorresponding dihydro dihydroxy compound. The polypeptides and the host cells are useful for preparing chiral diols for use in the polymer, cresin, pharmaceutical or rubber industry. The present sequence represents a naphthalene dioxygenase (NDO) mutant alpha subunit, given in the cc exemplification of the present invention.

dihydroxyindan, 1,2-dihydroxy-1,2,3,4-tetrahydronaphthalene, which involves contacting them with naphthalene, biphenyl, phenanthrene, indene, and 1,2-dihydronaphthalene respectively. The polypeptides and the host cells are also useful for preparing 1,2-dihydroxy-1,2-dihydroxy-themathrene or 3,4-dihydroxy-3,4-dihydroxy-themathrene which involves contacting them with phenanthrene. The polypeptides and the host cells are also used in bioremediation in which they oxidise an aromatic compound such as indene, 1,2-dihydronaphthalene, oxidise an benzocyclohelpt-1-ene, anthracene, phenanthrene, dibenzofuran, acenaphthylene, naphthalene, biphenyl, fluorene, dibenzofuran, corresponding dihydro dihydroxy compound. The polypeptides and the host cells are useful for preparing chiral diols for use in the polymer, cesin, pharmaceutical or rubber industry. The present sequence represents a naphthalene dioxygenase (NDO) mutant alpha subunit, given in the care exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       alpha subunit that contains substituted amino acids at specific positions. The polypeptides and host cells are useful for preparing (-)-(15,2R)-cis-napththalene dihydrodiol, (- or +)-cis-biphenyl-3,4-dihydrodiol, (15,2R)-cis-phenanthrene-1,2-dihydrodiol, cis-1,2-dihydrodiol,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel naphthalene dioxygenase mutant having a specific amino acid substitution for preparing chiral diols for use in the polymer, resin, pharmaceutical or rubber industry and for carrying out bioremediation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 13; Page 104-105; 151pp; English.

```

Sequence

Novel naphthalene dioxygenase mutant having a specific amino substitution for preparing chiral diols for use in the polyme pharmaceutical or rubber industry and for carrying out biorem

polymer, resin, bioremediation

acid

```

cc alpha subunit that contains substituted amino acids at specific cc positions. The polypeptides and host cells are useful for preparing cc (-)-(15,2R)-cis-napththalene dihydrodiol, (- or +)-cis-biphenyl-3,4-cc dihydrodiol, (15,2R)-cis-phenanthrene-1,2-dihydronaphthalene, which cc involves contacting them with naphthalene, biphenyl, phenanthrene, cc indene, and 1,2-dihydronaphthalene, biphenyl, phenanthrene, cc indene, and 1,2-dihydronaphthalene respectively. The polypeptides and cc involves contacting them with naphthalene, biphenyl, phenanthrene, and involves contacting them with phenanthrene. The polypeptides and cc dihydrophenanthrene or 3,4-dihydroxy-3,4-dihydrophenanthrene which cc involves contacting them with phenanthrene. The polypeptides and the cc host cells are also used in bioremediation in which they oxidise an cc aromatic compound such as indene, 1,2-dihydronaphthalene, cells are also used in bioremediation in which they oxidise an cc aromatic compound such as indene, 1,2-dihydronaphthalene, cc acenaphthylene, naphthalene, biphenyl, fluorene, dibenzo(1,4)dioxan, cc dibenzothiophene, 9,10-dihydroanthracene, or 9,10-dihydrophenanthrene a cc corresponding dihydro dihydroanthracene, or 9,10-dihydrophenanthrene a cc corresponding dihydro rubber industry. The present sequence represents cells are useful for preparing chiral diols for use in the polymer, cc anaphthalene dioxygenase (NDO) mutant alpha subunit, given in the cc exemplification of the present invention.
                                                                                             RESULT 15

                                                                           Вр
                                                                                                                                                                                                                                               The present invention describes a naphthalene dioxygenase (NDO) or NDO CC related complex (I) comprising several polypeptides which contain an CC alpha subunit that contains substituted amino acids at specific positions. The polypeptides and host cells are useful for preparing CC (-)-(15.2R)-cis-naphthalene dihydrodiol, (- or +)-cis-biphenyl-3,4-CC dihydroxyindan, 1,2-dihydroxy-1,2,3,4-tetrahydronaphthalene, which CC involves contacting them with naphthalene, biphenyl, phenanthrene, CC indene, and 1,2-dihydronaphthalene respectively. The polypeptides and CC dihydrophenanthrene or 3,4-dihydroxy-3,4-dihydroxy-1,2-CC dihydrophenanthrene which cells are also used in bioremediation in which they oxidise an CC involves contacting them with phenanthrene. The polypeptides and the CC host cells are also used in bioremediation in which they oxidise an CC aromatic compound such as indene, 1,2-dihydronaphthalene, CC benzocyclohelpt-1-ene, anthracene, phenanthrene, dibenzo(1,4)dioxan, CC dibenzothiophene, 9,10-dihydronaphthalene, dibenzothiophenaphthalene, biphenyl, fluorene, dibenzothiophenaphthalene, or 9,10-dihydronaphthalene, dibenzothiophenaphthalene, biphenyl, fluorene, dibenzothiophenaphthalene, biphenyl, fluorene,
